

Sustainability Policy of Diamant Hotel & Aparthotel

In our commitment to environmental, social, and economic sustainability, Diamant Hotel & Aparthotel is dedicated to implementing responsible practices that benefit the local community and the environment. Through our actions, we seek to preserve the natural beauty of Mallorca and contribute to the well-being of its residents.

We value Mallorca's rich culinary heritage and support local producers. Our cuisine is enriched with fresh, high-quality ingredients sourced from local producers. By promoting local products, we not only boost the regional economy but also reduce our carbon footprint by minimizing transportation distances.

We work closely with fishermen from the port of Cala Rajada to ensure a responsible supply of fresh fish.

We believe in the talent and experience of the local community. Therefore, we prioritize hiring local staff in all areas of our hotel. By providing employment and professional development opportunities to Mallorca's residents, we contribute to the island's economic growth and strengthen its social fabric.

We have implemented a rigorous recycling program across our facilities. We encourage waste separation and the proper disposal of recyclable materials to minimize our environmental footprint. Additionally, we promote the reuse of packaging and containers in our daily operations, reducing waste generation and fostering a culture of responsible consumption.

Through clear signage and informative messages in our rooms, we invite our guests to consider the environmental impact of washing towels daily and to opt for reuse whenever possible. This practice not only reduces water consumption but also minimizes the use of chemicals in laundry, promoting a healthier and more sustainable environment.

As part of our approach to personalized service, we also offer our guests the option to forego daily room cleaning as a way to save resources and reduce our environmental impact.

In line with our commitment to environmental sustainability and reducing our carbon footprint, we have made a significant investment in transitioning to renewable energy sources. One of the standout measures has been replacing the main oil-fired boiler with an aerothermal system. Aerothermal energy is an innovative technology that harnesses the energy present in the air to generate heat and hot water. By using a natural and renewable energy source, we reduce our dependence on fossil fuels like oil, thereby lowering our greenhouse gas emissions and contributing to the fight against climate change.

We are committed to eliminating single-use packaging in all our operations. We choose sustainable alternatives, such as biodegradable or reusable containers, to reduce negative environmental impact. By adopting this measure, we contribute to reducing plastic pollution and protecting Mallorca's marine ecosystems.

At Diamant Hotel & Aparthotel, sustainability is an integral part of our identity and guides our actions in every aspect of our operation. We are committed to continually innovating and improving our practices to preserve the natural charm of Mallorca and ensure a prosperous future for generations to come.
